

CommVault & CaseCentral Provide Complete End-to-End eDiscovery

Improve eDiscovery Efficiencies and Cost Savings for all Electronically Stored Information (ESI)

KEY BENEFITS

- ▶ Leverage “one stop shop” for legal teams and associated IT departments burdened with the pressure and cost of ESI discovery and review
- ▶ Reduce the cost, simplify and accelerate enterprise-wide eDiscovery and review
- ▶ Start simply with a single event and seamlessly migrate to a multi-matter, repeatable process, using the same technology platform, when ready
- ▶ Define defensible, repeatable and measurable processes from Information Management through Production, to drive down costs and risk
- ▶ Manage information proactively, according to records retention and legal hold schedules, across the enterprise and active litigations
- ▶ Measure efficiency (review time), effectiveness (review quality) and cost (per document, per case, per law firm) across one or multiple cases and law firms, down to the reviewer level
- ▶ De-duplicate data upon capture and re-use documents and work product from matter to matter
- ▶ Perform early case assessments to quickly and efficiently determine the best case strategy

The Challenge

A combination of factors is pushing organizations to streamline eDiscovery in response to litigation, regulatory inquiries and corporate investigations. Enterprise Strategy Group (ESG) estimates that 55% of IT decision makers expect an increase in eDiscovery processing (ESG, 2008). This is due, in large part, to the fact that nearly all corporate data is now stored electronically. Couple this with the rise in litigation and you get eDiscovery timeframes and compliance SLAs that are regularly being overshot, causing unnecessary risk and exposure, and skyrocketing review costs.

The Solution

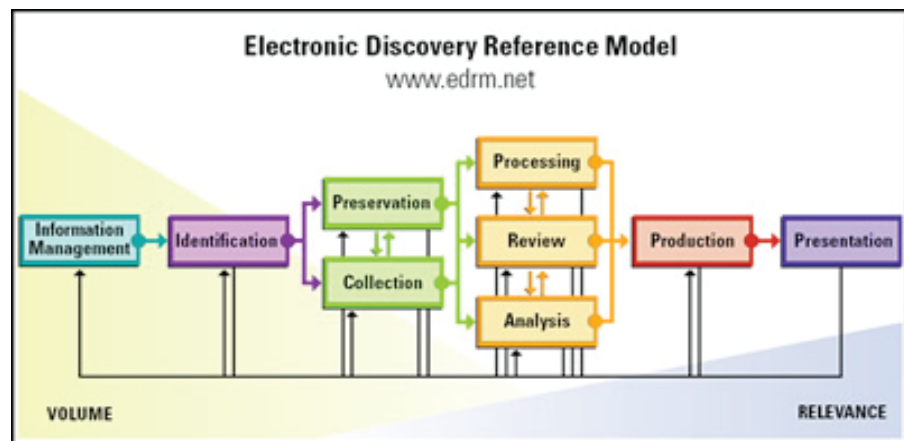

Fortunately, there is a solution. Together, CommVault® Simpana® and CaseCentral Enterprise™ provide a 360 degree perspective on all aspects of eDiscovery to offer a true end-to-end approach not seen with other collaborations today. CommVault and CaseCentral streamline eDiscovery processes as defined by the Electronic Discovery Reference Model (EDRM), from Information Management, Identification, Preservation, and Collection to Processing, Review, Analysis and Production. CaseCentral enhances CommVault’s already robust eDiscovery capabilities to provide a combined solution to help mitigate the risk of sanctions and reduce exposure.

How it Works

CommVault offers a unique solution to manage all types of data across all repositories with one single interface. The CommVault Singular Information Management® approach provides a flexible, audit-ready answer to eDiscovery concerns and includes a comprehensive strategy to enable data management and content indexing that spans archive, data protection and resource management across a broad reach of application, database and document environments. This leads to a more intuitive approach to the management of ESI without the cost overhead or expensive new storage. Following the EDRM, CommVault Simpana provides customers with market-leading Information Management, Identification, Collection and Preservation capabilities. CommVault can help customers reduce costs and shorten time to review, saving as much as 75% on collection and preservation costs depending on the nature and location of data, according to some CommVault customers.

Once all the evidence has been preserved, CaseCentral manages the Processing, Review, Analysis and Production for all cases from a single interface. CommVault Simpana provides a seamless and ideal delivery of collected, preserved and filtered ESI for review and production on the CaseCentral™ or CaseCentral Enterprise™ eDiscovery review platform. CaseCentral provides an intuitive and efficient review application that can result in savings on legal costs associated with reviewing

documents, as well as industry- first process analytics which allow monitoring and measuring case status, review costs and rates by user or firm across matters. The interaction between the respective solutions offers the complete coverage of EDRM requirements and re-use of documents and work product.

CommVault and CaseCentral offer a complete enterprise-wide eDiscovery solution as outlined in the Electronic Discovery Reference Model (EDRM), which is recognized as the industry standard framework for electronic discovery processes.

CommVault Simpiana, together with CaseCentral's unified review platform provides efficiency across the main areas of cost implication associated with eDiscovery today. Significant IT costs reductions and efficiencies can be achieved across the Identification, Collection and Preservation of ESI content with CommVault's software. Furthermore, CaseCentral helps legal teams speed the review cycle and measure attorney review, the greatest single cost in eDiscovery with built in efficiencies for Processing, Review, Analysis and Production.

Conclusion

CommVault Simpiana and CaseCentral provide an unprecedented level of business intelligence from all types of ESI. With this intelligence, organizations can rapidly find key evidence, assess their position quickly, and monitor costs, thereby helping to choose the best strategy earlier in the litigation process.

For organizations wanting to reduce the cost, duration and risk associated with eDiscovery, CommVault and CaseCentral offer a comprehensive, combined solution in the marketplace that delivers immediate and significant return on investment.
